### **PC TROUBLESHOOTERS, INC. NOW OFFERS IP NETWORK CAMERAS** *The Result: A COMPLETE IT Security Solution for the RI Business Community*

Warwick, RI, February 15, 2008 – **PC Troubleshooters, Inc.** is announcing a strong addition to its product mix: **IP Surveillance Cameras**. *IP Surveillance*, also known as **Network Video**, is a system that enables the user to monitor and record “live” video over an IP Network (LAN/WAN/Internet). Images can be viewed from *anywhere at anytime* around the world with an internet connection.

With this addition, **PC Troubleshooters** can now offer a COMPLETE IT Solution to the RI business community; from computer and network security to employee and facility security as well. Network Video provides the business owner a cost-effective solution to video surveillance. The need for separate monitors and cables to install surveillance cameras (like analog cameras) is no longer necessary, providing a flexible and scalable solution.

IP Cameras provide exceptional image clarity that is comparable to digital images. The viewer can now zoom-in and view in-real-time, minute details that analog cameras can not.

*“PC Troubleshooters is excited to offer network surveillance cameras to our clients.”* said Eric M. Shorr, President of **PC Troubleshooters**. *“Security has become a major issue for business owners today. By offering this new surveillance program, coupled with our extensive networking background, we are able to provide our clients a complete security solution utilizing the latest technology. That is PC Troubleshooters niche.”*
